The **Barcode Scanner Controller Matched Verification System** is mounted onto a Horizon™ BQ-460SC/470SC Digital Perfect Binder to read a barcode on cover, front, and rear to confirm they match. If the pages are not a match the light will indicate which is not matched and the machine will not operate. The system has a keyed bypass switch for which an administrator can turn off the barcode verification system. The internal digital PLC can be programmed to control different functions of the machine.
